## New Trends in Animal Welfare

John Webster  
Emeritus Professor,  
University of Bristol

# ANIMAL WELFARE

- *What is it to them?*
  - What is meant by welfare, wellbeing, sentience, stress, suffering?
- *What is it to us?*
  - Ethics of animal welfare
- *What should we do about it?*
  - Awareness, education, promotion

## **What is animal welfare?**

-questions posed by 'welfare scientists'

- Is the animal living a normal life?
- Is the animal fit and healthy?
- How does it feel?

## *The alternative and insufficient questions posed by 'welfare scientists'*

- Is the animal living a normal life?
  - Ethology, sociobiology
- Is the animal fit and healthy?
  - Veterinary science
- How does it feel?
  - Psychology, motivation analysis

## ***So what then is animal welfare?***

- It is the physical and mental state of a sentient animal as it seeks to cope with environmental challenge
- It thus covers the full spectrum
  - satisfaction to suffering

# “Well-being”

## *‘Fit and happy’*

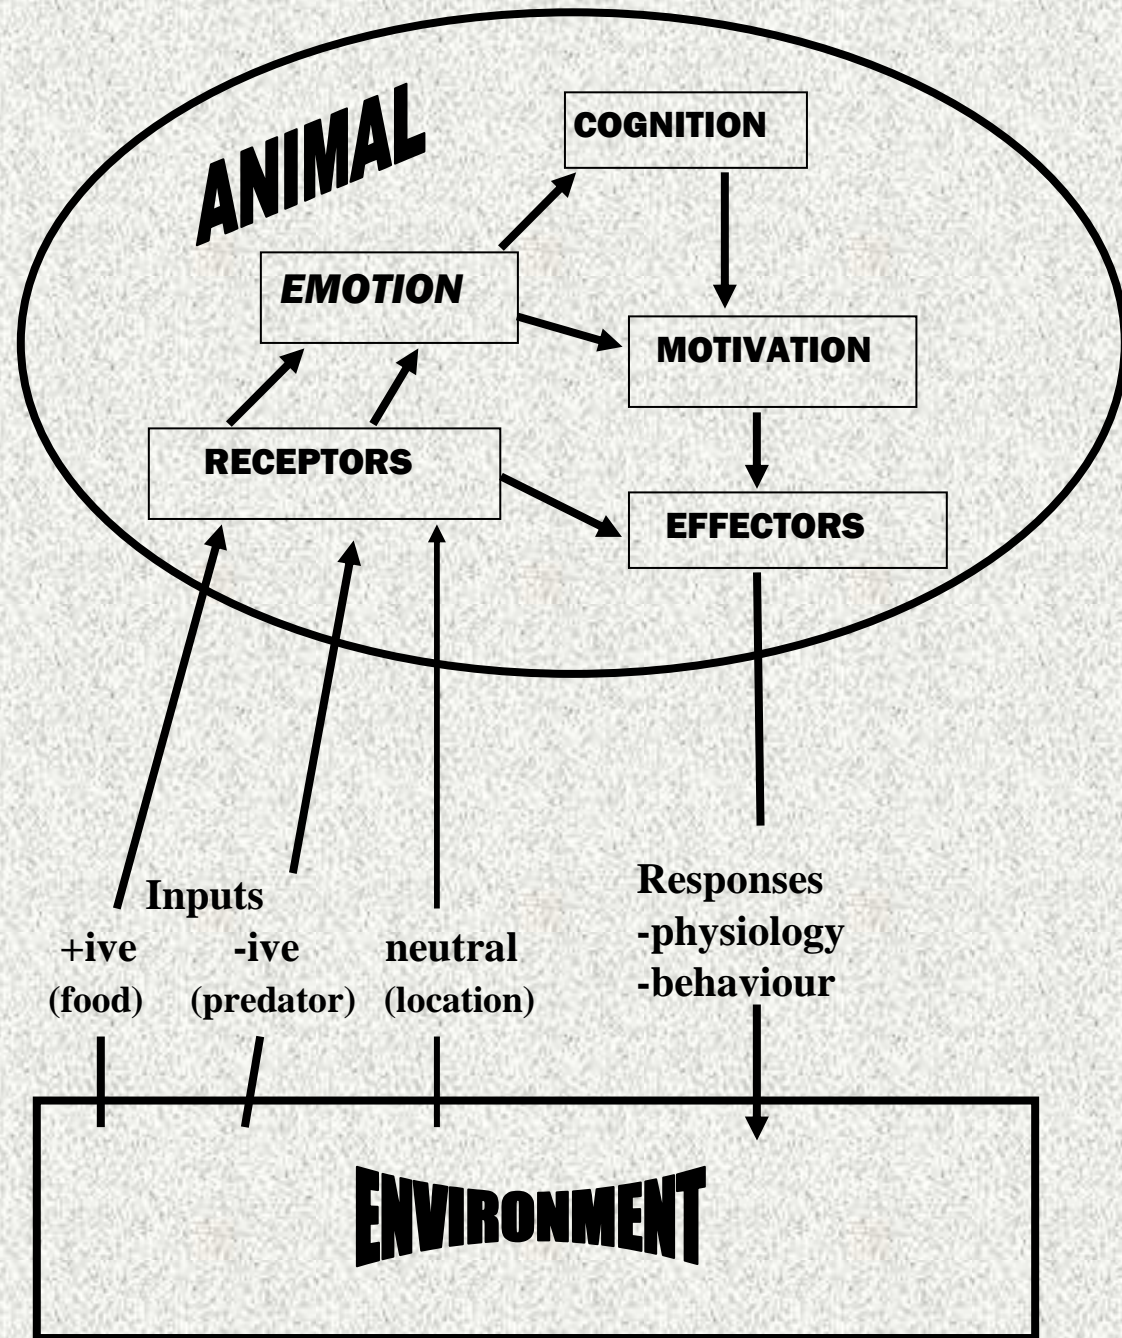

[wherever they may be]

- sustained physical and mental health
  - absence of disease
  - absence of suffering (e.g.pain, fear, exhaustion)
- feeling good (‘happy’)
  - comfort, companionship, security

# *What is animal sentience?*

- **‘Feelings that matter’**
  - Perception of environmental stimuli
  - Interpretation: emotion & cognition
  - Motivation:
    - a measure of how much it matters
  - Measured response
  - Assess effectiveness of outcome
  - Modify mood and understanding in light of experience

# A Sentient View of the World

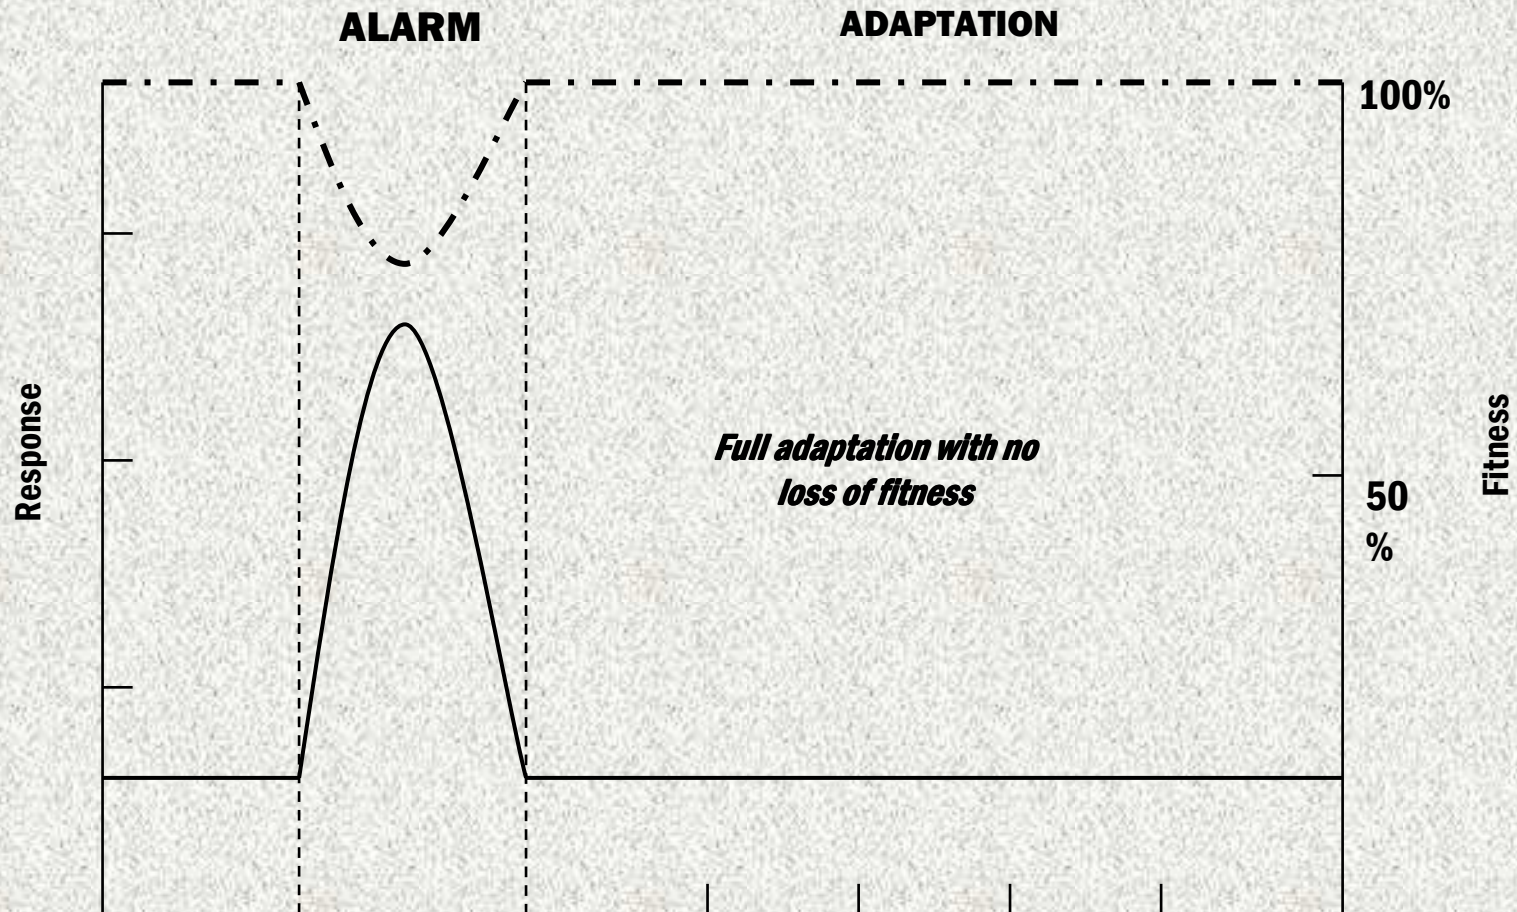

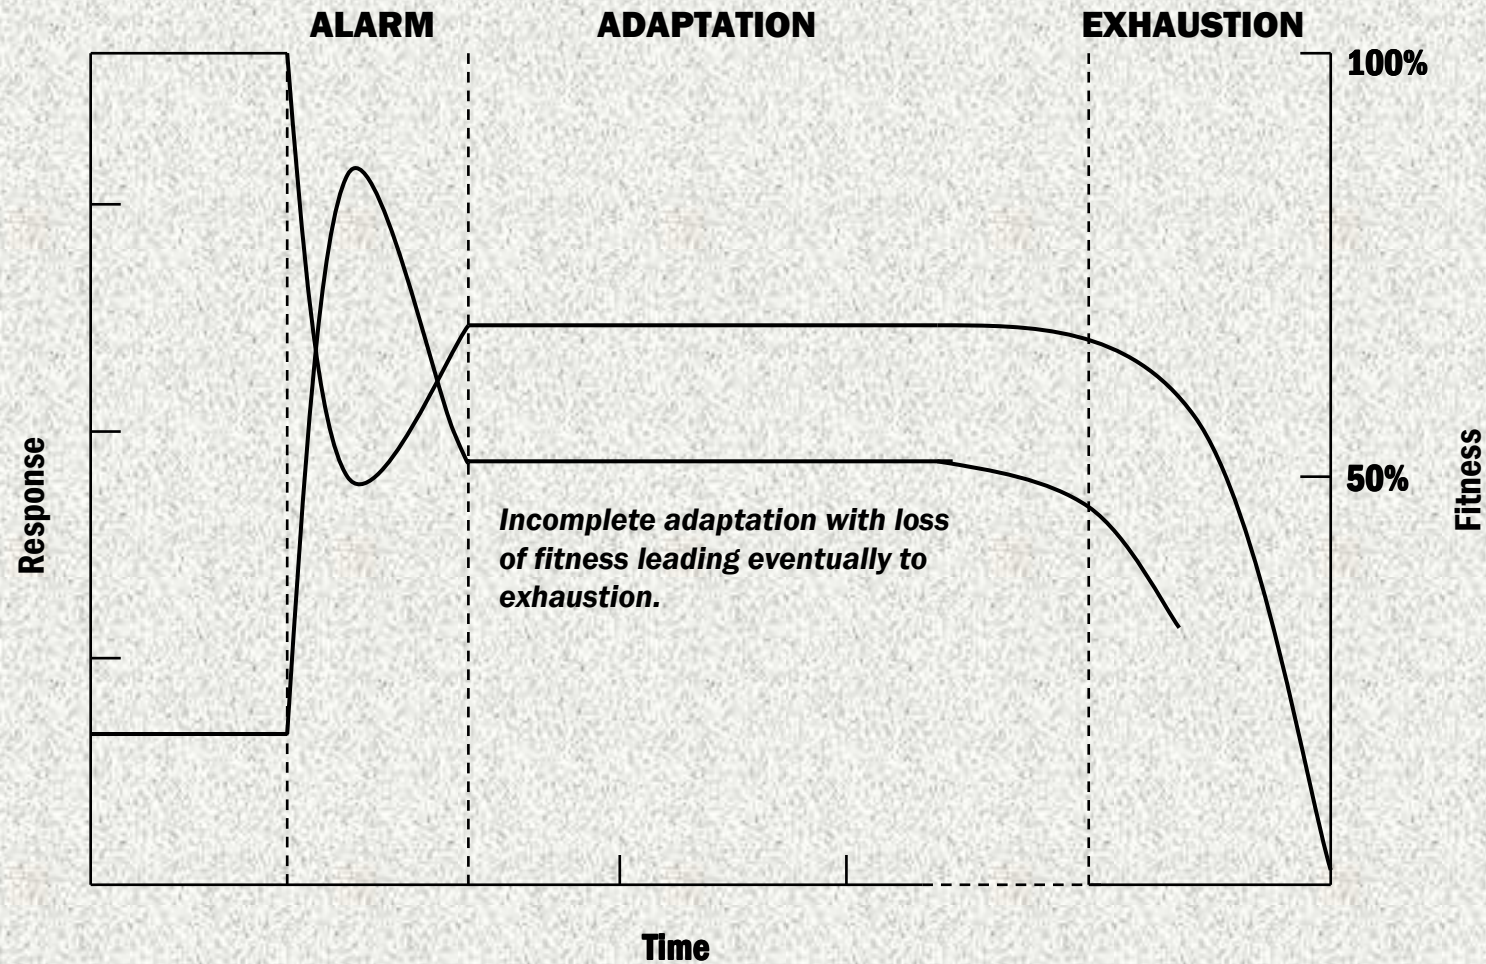

# Animal Sentience

- **‘Feelings that matter’**
  - Perception of environmental stimuli
  - Interpretation: emotion & cognition
  - Motivation:
    - a measure of how much it matters
  - Measured response
  - Assess effectiveness of outcome
  - Modify mood and understanding in light of experience

# Stress 1: alarm then full adaptation

# Stress 2: alarm and incomplete adaptation

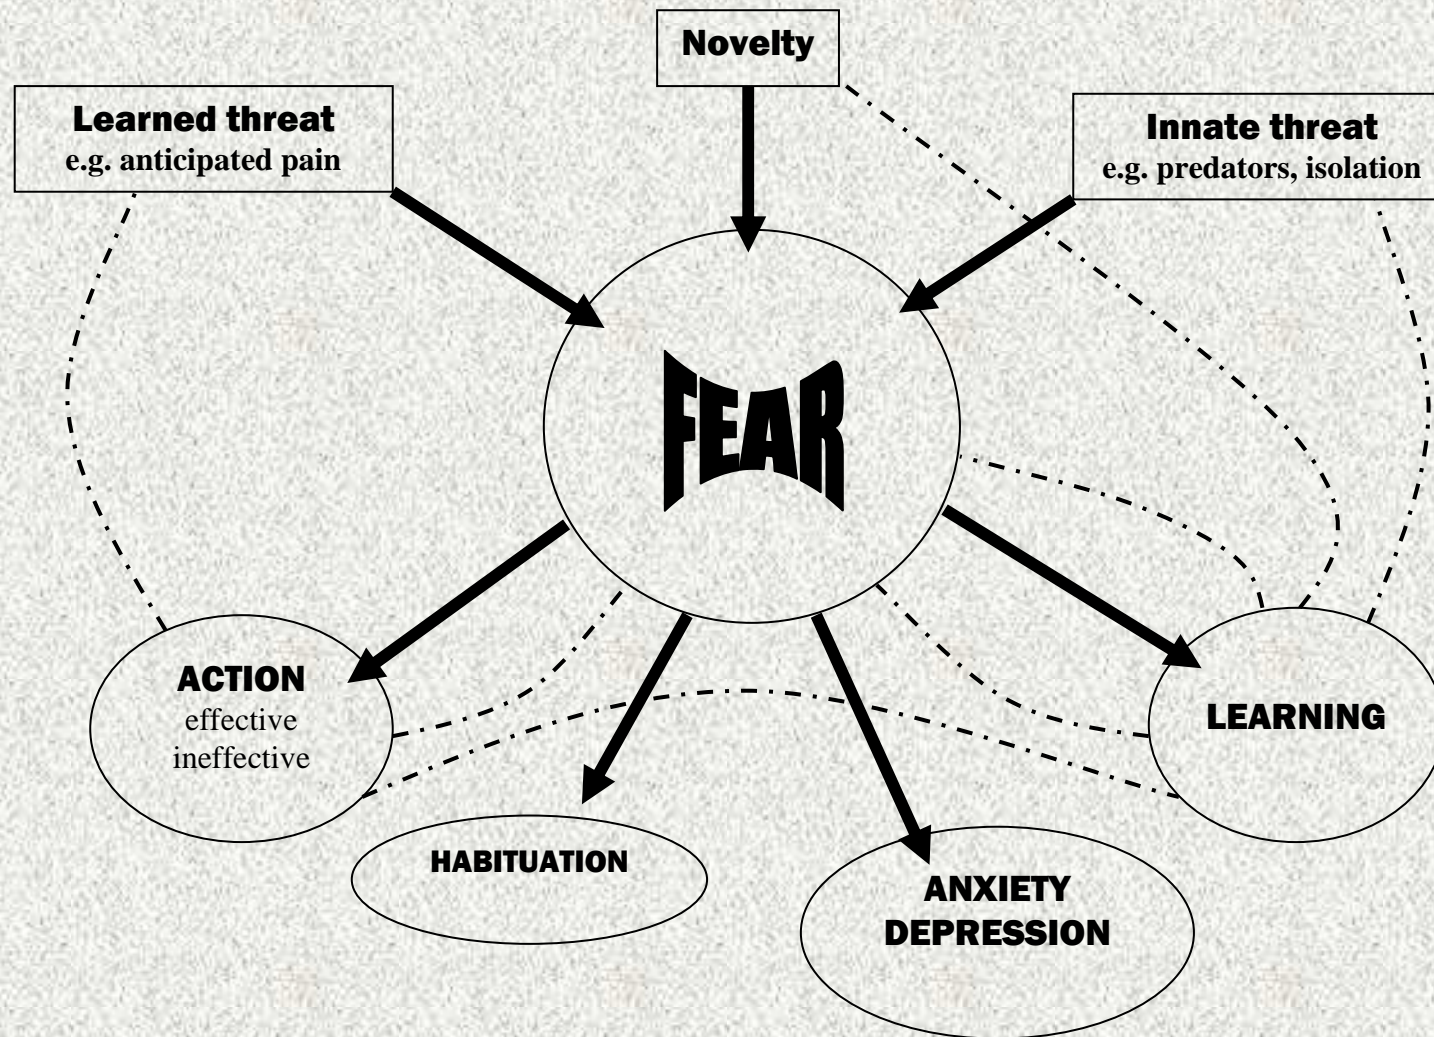

## ***Stress and suffering***

- Suffering occurs when an animal cannot cope (or has difficulty in coping) with unpleasant feelings:
  - because the sensations are too intense, too complex or too prolonged
  - because it is unable to respond in a way that will effectively improve how it feels

## **Suffering: failure to cope**

- Exhaustion
- Injury and chronic pain
- Malaise -feeling ill
- Chronic anxiety/apathy

# *Fear & Anxiety*

# Pain

## *‘How do we know it matters?’*

- Immediate reaction
  - alarm, escape- *No*
- Modified behaviour
  - rest and locomotor changes- *maybe not*
  - aversion/learned avoidance - *possibly*
  - reduced positive behaviour (e.g. grooming) - *probably*
- Altered Mood
  - apathy, reduced appetite - *probably*
- Response to analgesics
  - externally administered - *not necessarily*
  - self selected - *Yes*

# **Animal Sentience**

## *Why does it matter to us?*

- Suffering and pleasure are defined by the capacity to feel, not the capacity to think
  - chimpanzee = horse = rat
- Sentient animals learn by experience as they attempt to cope with life. If they fail, they suffer
  - suffering is a learnt experience

# Relief of suffering

Symptom	Medical	Nursing
Fever	Antipyretics	Thermal comfort
Pain	Analgesics NSAIDs	Physical comfort Rest
Inappetence	Tonics	'Treats'
Fluid loss	i/v Rehydration	Oral rehydration
Mental distress	Unnecessary?	Reduce social stress TLC

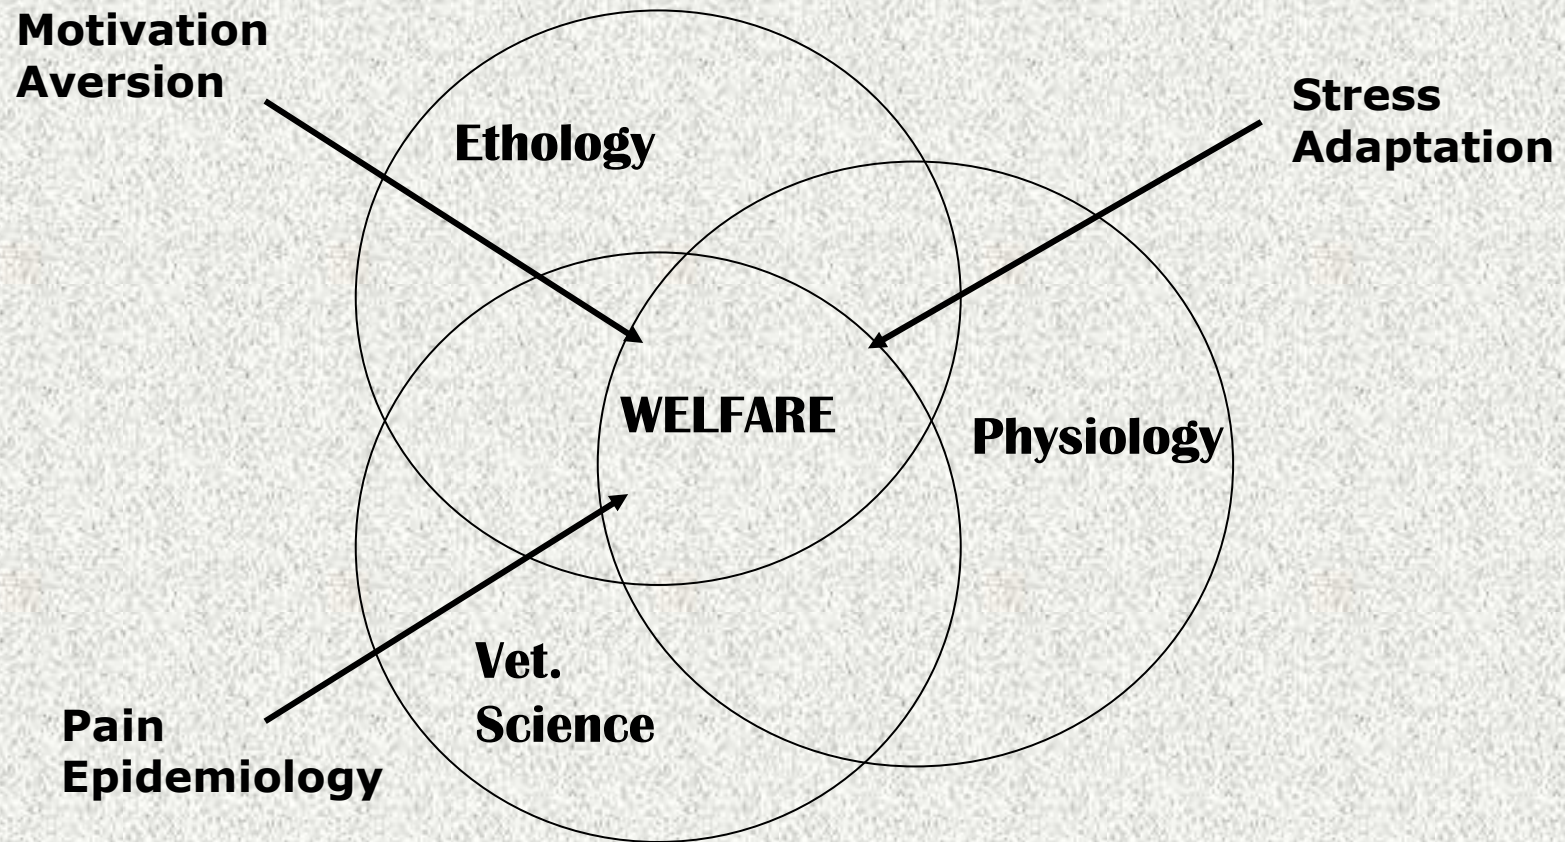

# The Ethics of Animal Welfare

	Wellbeing	Autonomy	Justice
Human society	Wholesome, cheap food	Freedom of choice	Welfare legislation
Producers	A fair living	Free competition	Good husbandry
Farm animals	Wellbeing at all times	Environmental enrichment	<i>“A life worth living”</i>
Living environment	Conservation Sustainability	Biodiversity	Respect for envt. & stewards

## **Right action: *What should we do?***

- Awareness
- Animal welfare science and education
- Animal welfare assessment in practice
- Welfare-based quality assurance
- The role of the veterinarian

# What is welfare science?

# **A Curriculum for Animal Welfare**

- Principles of husbandry and welfare
- Animal welfare science
- Animal welfare Law and Regulations
- Animal welfare in clinical practice

# **Principles of husbandry and welfare**

- Definitions of welfare, sentience and suffering
- The “Five Freedoms”
- Good husbandry: management of farm and companion animals
- Ethics of animal welfare

## **Animal Welfare Science (y2)**

- Sentience and suffering
- Physiology of pain, stress and adaptation
- Ethology
  - normal behaviour in relation to environment
- Psychology
  - perception, emotion, cognition and motivation
- Abnormal behaviour
  - causes and management of anxiety, stereotypies etc.
- The human-animal bond.

# **Animal Welfare in Clinical Practice**

- Practical assessment of husbandry and welfare
  - animal-based welfare monitoring
- Recognition of animal abuse
  - unnecessary suffering
- Herd health and welfare
  - on-farm strategic planning
  - welfare-based quality assurance

*- so Welfare Science is part of Veterinary Science and vice versa.*

*- thus an understanding of animal welfare state (as perceived by the animal) is an essential prerequisite for proper professional veterinary care.*

## *Why do vets. need Welfare Science?*

- because animals need vets. who understand not only what keeps them healthy but also how they feel as they seek to meet their physiological and behavioural needs.

## *What are?*

- Animal welfare and wellbeing
- Sentience, stress and suffering
- Animal welfare science and education
- **Animal welfare assessment in practice**
- Welfare-based quality assurance
- The role of the veterinarian

# Welfare assessment and assurance

- *How is it for the dairy cow?*

# Freedom and Provisions

- *Freedom from hunger and thirst:*
  - access to fresh water and a diet to maintain full health and vigour
- *Freedom from discomfort:*
  - a suitable environment: .e.g. shelter and a comfortable resting place
- *Freedom from pain, injury and disease:*
  - prevention and/or rapid diagnosis and treatment
- *Freedom from fear and stress:*
  - ensure conditions which avoid mental suffering
- *Freedom to express normal behaviour:*
  - ensure sufficient space, proper facilities and social contact

## Possible welfare problems for the Dairy Cow

- Hunger, malnutrition or metabolic disease
  - improper feeding for phenotype
- Chronic discomfort
  - cubicle design, loss of condition
- Pain from mastitis or lameness
- Increased susceptibility to infection
- Anxiety/insecurity
- Metabolic or physical exhaustion

## Heritabilities, genetic (below) and phenotypic correlations

Trait	1	2	3	4
Yield (kg)	<b>0.33</b>	0.20	-0.01	0.04
C.Interval (d)	0.39	<b>0.025</b>	0.04	0.04
Mastitis	0.26	0.11	<b>0.057</b>	0.05
Lameness	0.17	0.20	0.33	<b>0.036</b>

**MANAGEMENT**  
procedures  
stockmanship

**RESOURCES**  
food  
accommodation

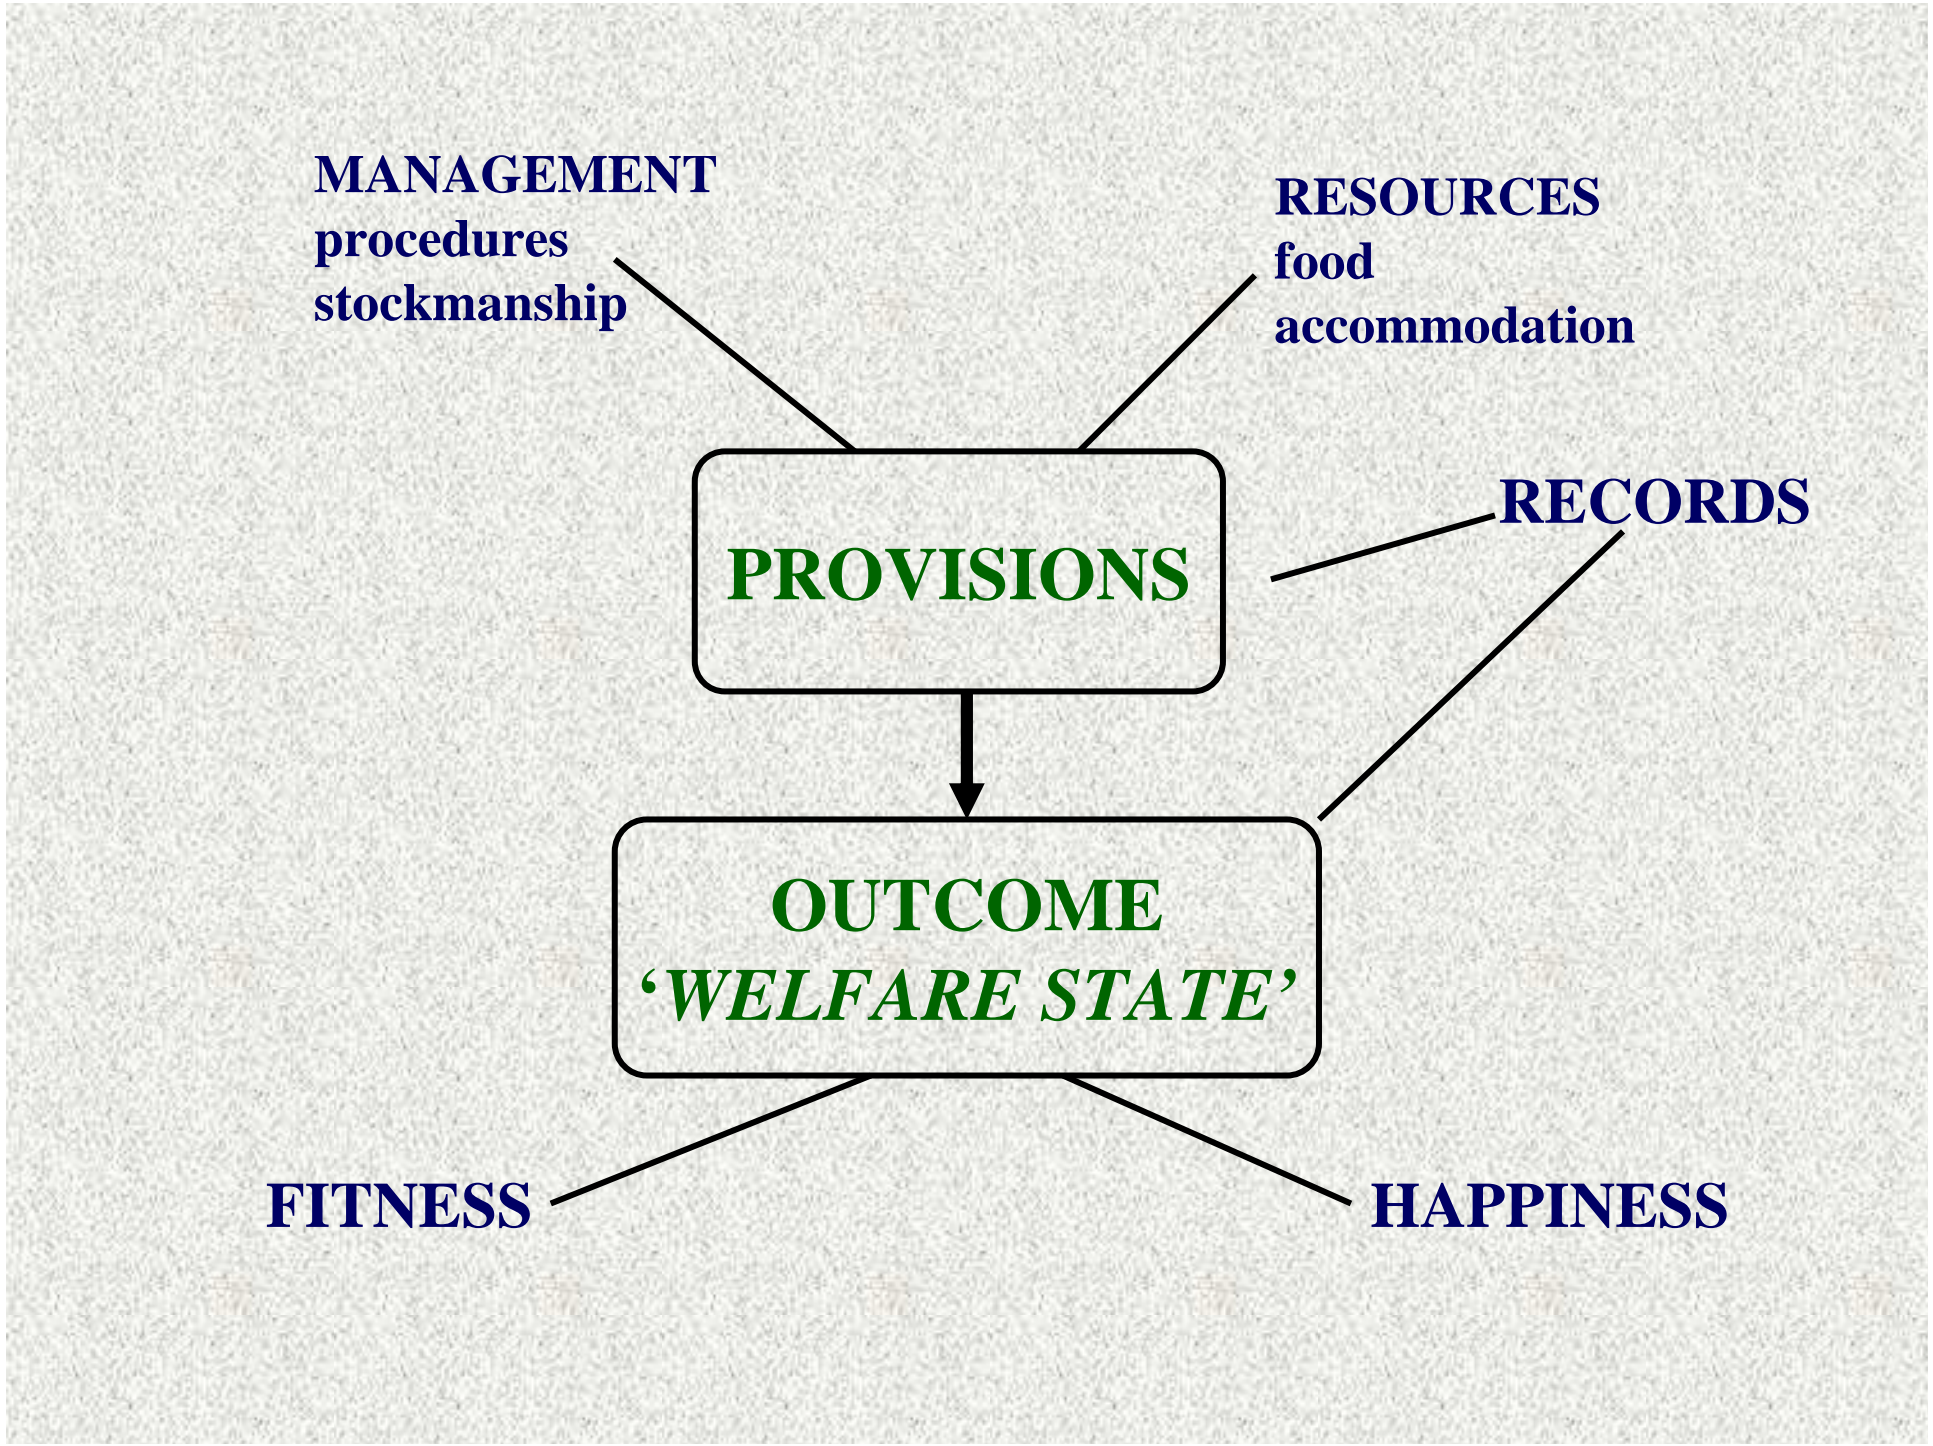

**PROVISIONS**

**RECORDS**

**OUTCOME**  
*'WELFARE STATE'*

**FITNESS**

**HAPPINESS**

# **Animal-based indices of welfare observations & records**

- **Fitness**

- Nutrition: body condition, growth, fertility
- Environment: skin & coat condition, injuries
- Health records, prevalence of (e.g.) lameness

- **Feelings**

- Chronic discomfort
- Pain from (e.g.) lameness, injury
- Fear & stress from (e.g.) disturbed behaviour

# Results Profile of 53 Dairy Farms

Dr H Whay

© Bristol University

**Measure**                      **Source of Information**                      **Unit of Measure**

**Score Categories**  
(20% in each banding)

Est. - Estimated by farmer, Obs.-Observed during visit, Rec.-Farm records

			A		B		C		D		E	
<b>Health &amp; Production</b>												
<i>Nutrition</i>												
Annual Ave. milk yield	Est.	Litres	10500	8300	8200	7789	7652	7118	7000	6500	6313	4275

Assisted calving cases	Est.	/100 cows/year	0	0	0	0	0.9	1.1	1.1	4.8	4.9	40
<i>Mastitis</i>												
Mastitis cases	Rec.	/100 cows/year	0	9	11.5	20.7	21.3	34.5	40.8	46.2	46.8	120
Mastitis cases	Est.	/100 cows/year	2.8	13.3	14.8	18.9	20	32.7	33.0	46.7	46.8	89.1
<i>Lameness</i>												
No. of lame cows	Obs.	%	0	13.6	13.8	18	19.5	23.5	23.6	29.6	29.8	50
Lameness cases	Rec.	/100 cows/year	0	0	0	0	2.2	4.1	4.3	11.0	11.5	42.3
Lameness cases	Est.	/100 cows/year	3.2	8.7	9.2	14.7	14.9	20.7	21.3	34.8	34.9	54.4
Claw overgrowth <sup>3</sup>	Obs.	%	0	11.8	12.5	25	26.7	34.4	35	46.2	46.4	76.5
Poor claw conformation <sup>4</sup>	Obs.	%	0	0	0	0	3.3	7.1	7.4	16.7	17.9	37.5
<i>Non-specific Illness / Mortality</i>												
Dull / Obviously sick	Obs.	%	0	0	0	0	2.2	3.3	3.6	6.3	6.7	20
Sudden death / casualty	Est.	/100 cows/year	0	1.0	1.1	1.7	1.8	2.8	3.1	4.1	4.3	15.6

# Example : % requiring action - intervention level

## Thin cows (% with BCS<2)

## Mastitis cases

## Lame cows (%)

## Swollen hock (%)

## Failures of Provision

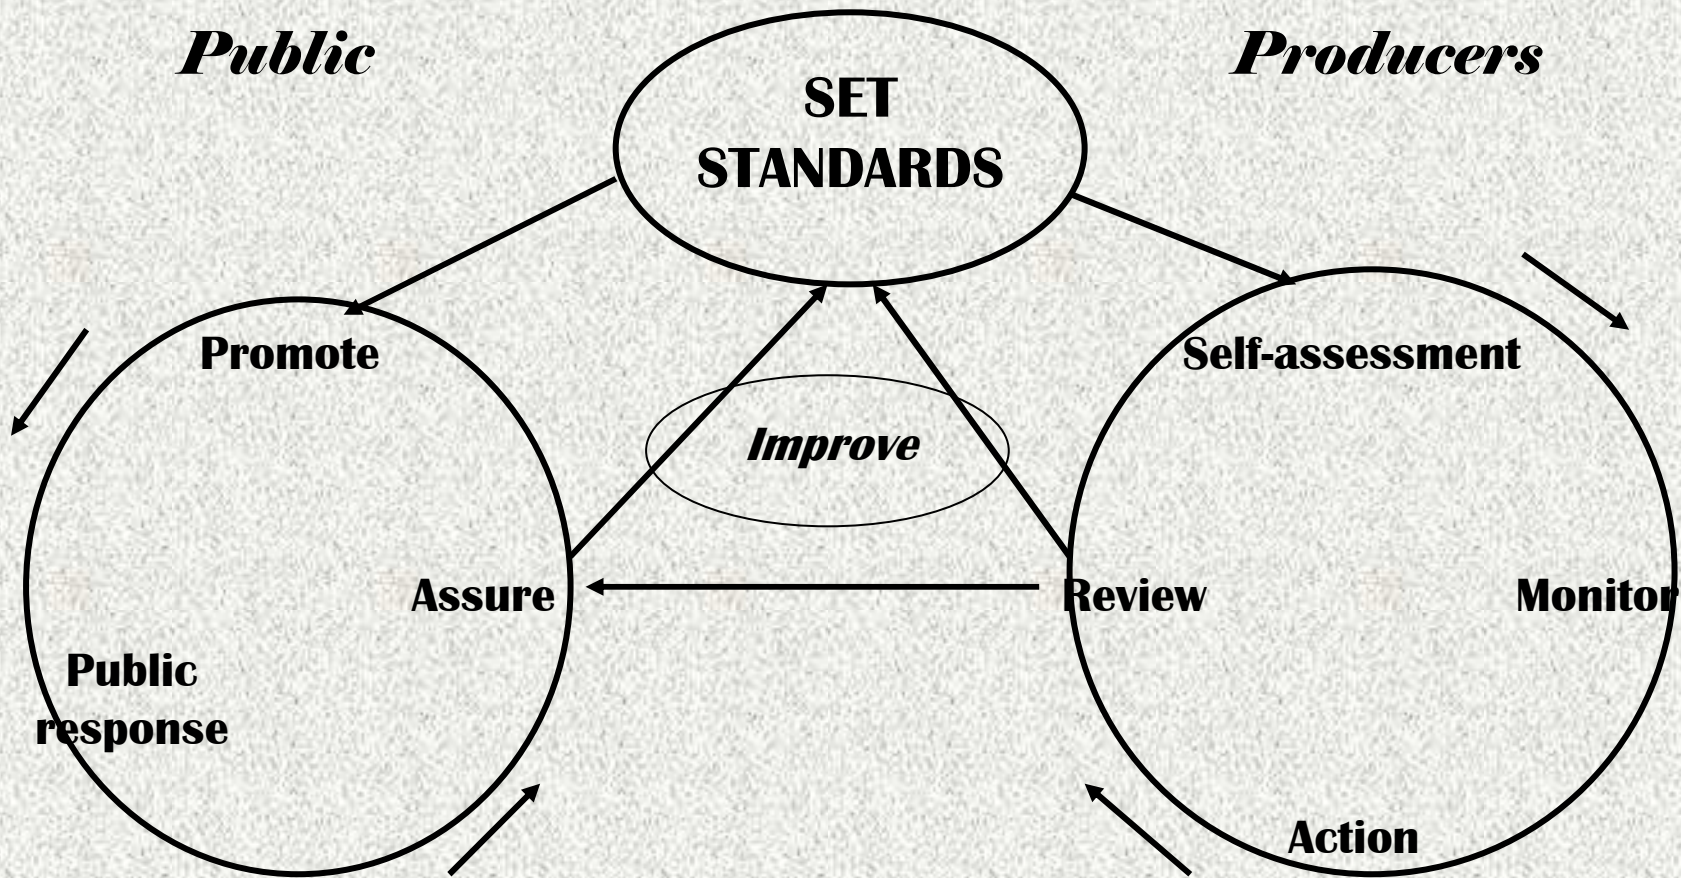

- Inadequate nutrition for phenotype
  - infertility, metabolic disorders
- Inadequate environment for phenotype
  - mastitis, lameness
- Phenotype ‘unfit for purpose’
  - premature culling

## *What are?*

- Animal welfare and wellbeing
- Sentience, stress and suffering
- Animal welfare science and education
- Animal welfare assessment in practice
- **Welfare-based quality assurance**
- The role of the veterinarian

# Welfare-based Quality Assurance

## *“The Virtuous Bicycle”*

# The 'Good Shepherd' Brand

- Guarantees
  - responsible land use
  - biosecurity
  - animal welfare
- Does *not* claim
  - tastier food
  - healthier food

# **“Our Constant Endeavour”**

## **The Duty of the Profession**

- Professional ability
  - to assess welfare and recognise suffering in a sentient animal or population of animals
  - to identify and remedy failures of provision
- Humanity
  - to respect the needs of animals and their owners
- Courage
  - to act according to that which is right, not simply that which is regulated
